

Bayyavarapu Nagurbi

Guntur, Andhra Pradesh, India | +91 7569362085 | bayyavarapunagurbi1914@gmail.com | LinkedIn | GitHub

CAREER OBJECTIVE

Aspiring Associate System Engineer with hands-on experience in full-stack development using MERN stack and a strong foundation in AI and Data Science. Skilled in building scalable, responsive web applications. And delivering optimized performance and user-friendly solutions that drive real impact.

EDUCATION

Malineni Lakshmaiah Women's Engineering College

Bachelor of Technology in Artificial Intelligence and Data Science — CGPA: 8.7/10

Andhra Pradesh, India

2022 – 2026

TECHNICAL SKILLS

Programming Languages: Python

Frontend Development: React.js, HTML5, CSS3, JavaScript (ES6+)

Backend Development: Node.js

Database Technologies: MySQL

Development Tools & Practices: Git, GitHub, VS Code, Jupyter Notebook, Google Colab

INTERNSHIP

MERN Stack Development Intern

EliteTech

September 2025 – October 2025

- Built responsive web applications using React.js, HTML5, CSS3, and JavaScript, optimizing frontend performance by 20%
- Integrated RESTful APIs with MySQL database for seamless data flow between frontend and backend services
- Collaborated with team members using Git for version control

PROJECTS

AgroBot – AI-Powered Agricultural Assistant | GitHub Repository

- Developed an AI-powered conversational assistant using Natural Language Processing to provide real-time, personalized agricultural guidance to farmers
- Implemented chatbot functionality to understand farmer queries and deliver accurate recommendations on crops, diseases, fertilizers, and best practices
- Built scalable backend using Python and integrated APIs for seamless communication between AI services and frontend
- Reduced farmers' dependency on traditional advisory systems by creating accessible, user-friendly interface for rural areas
- Tools & Technologies:** HTML, CSS, JavaScript, Python

Smart Suraksha – IoT-Based Wearable Fall Detection Device | GitHub Repository

- Developed IoT-based wearable device to detect elderly falls with real-time alerts in a 36-hour AI-IoT hackathon
- Programmed sensor integration using C++ and Arduino for accurate fall detection and immediate notification system
- Integrated cloud platforms for data storage and real-time monitoring capabilities
- Collaborated with team members to rapidly prototype and deploy functional solution under time constraints
- Tools & Technologies:** C++, Arduino, IoT

CERTIFICATIONS

- Cloud Computing – NPTEL
- DotNet Full Stack Developer – Wipro (TalentNext)

HACKATHON & WORKSHOP

- AI-IoT Hackathon (36 Hours):** Built and prototyped an AI-IoT solution in a team environment.
- Design Thinking Ideathon Workshop by Idea Labs:** Applied design thinking and collaborative problem-solving to real-world challenges.
